

### Program Description

The Electronics Engineering Technology AAS Program is concerned with the theory and practice of applied electronics engineering. It is designed to provide students with the skills and knowledge required to work with electronic equipment in a wide variety of high-tech forms, often assisting electronics engineers. Graduates generally maintain, repair, test and modify complex electronic systems, conduct research and develop products.

### Career Opportunities

Recent graduates of the electronics engineering technology program have accepted positions with the following titles: electronics engineering technician, electrical technician and industrial technician.

### Program Learning Outcomes

Upon successful completion of this program, students will be able to:

- Design and construct basic circuitry based on an in-depth knowledge of electronic devices, circuits and embedded systems.
- Apply mathematics to the development of ideas based on scientific and engineering principles.
- Install, maintain and repair electronic circuits and systems using extensive knowledge of theory, test equipment and procedures.
- Apply understanding of electronic devices, circuits, systems, software and procedures to practical situations.
- Adapt and extend knowledge of electronics to new devices, circuits and systems.
- Communicate technological ideas and information with others verbally, graphically and in writing.
